#### THE SOIL AN ASSET.

Fo Conserve It and Transmit It a Duty to Posterity.

In presenting the last annual report of the Wisconsin agricultural experiment station Dean H. L. Russell draws attention first to the study of the foundation of all agriculture, the soil, in the following words:

The soil is the great fundamental asset in our national wealth. Out of it come life and sustenance for the whole world of nature and mankind. Formerly it was customary to look upon it merely as a mass of thert particles, but we know that it is composed of the most complex materials, and in place of being dead and inert it is pulsing with myriad forms of life. These living organisms act and react not only on each other, but on the complex soil particles with which they come in con

The processes of soil formation are continually in the making. Weathering is slowly but constantly releasing new plant food, while at the same time the processes of depletion, erosion, leaching and waste are lessening the value of this asset.

To conserve this bank account and to transmit it unimpaired to future generations is a duty which the human race owes to posterity; but, as with nearly all of our natural resources, man has wasted more than he has used. In earlier years when knowledge did not exist or was imperfectly appreciated wanton practices led to rapid depletion or exhaustion. Every virgin area that has been opened up for settlement by man has had its pioneer generation of soil miners, but if future human life is to receive adequate support from the soil sooner or later the soil tiller must quit robbing the land and feed his soil as he feeds his flocks

Science has now shown in no unmis takable terms that as the chain is no stronger than its weakest link, so the soil is no richer than its content of its most indispensable element. If depleted of its potash or phosphorus, whether by age long leaching or more rapid robbery by careless crop production matters little. The effect is the same.

Therefore the fundamental problem is to know how to manage our solls so that not only will they bear fruit, but while doing so they will also retain their original fertility.

Binder Trouble.

[M. A. R. Kelley, Missouri station.] The self binder probably receives more abuse and greater neglect than any other machine on the farm. While its life is measured in years, its usefulness is counted in days. The average life of a binder is five years. During this period it is used a total of approximately 70 to 100 days. By providing adequate shelter for it and giving it proper care its life can be increased and the repair bill reduced.

One of the first things to do in getting the binder ready for work is to see that the guards are in line. Sickle sections and ledger plates which are badly nicked should be replaced with new ones. Adjust the clips so that the sickle is held firmly and gives a true shearing cut. The lost motion in the pitman and connections should be taken up and the sickle made to reg. Charles II."-London Tatler. ister. If it is necessary to take the binder attachments apart, much trouble and time can be saved by marking the parts with a cold chisel, showing how they are put together, if they have not been previously marked. If the knife is occasionally sharpened and sept in good condition it will relieve the strain and wear on the knotter parts.

Oli should be used a little at a time. but at frequent intervals. Different parts of a binder require different amounts of lubrication. It is not necessary to give the binder frame a bath in oil and let the bearings oil themselves by process of absorption. This only aids in accumulation of dust and grit, which soon work into the bearings.

For Weeding Beds.

weeding beds covered with vines, such as ivy, vinca or honeysuckle, a good tool is made from an old garden rake. Cut off all but the

two center prongs of the rake. This will work in close to the plants and enable the operator to remove all the weeds, cultivating the ground at the

#### **Ţ**Ġ¢ĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠĠ ORCHARD AND GARDEN.

\$

Phlox beds will need more water than most plants. Don't let them dry out. Verbenas love the sun and heat and will thrive with very little mois-

Soak the roots of raspberry and blackberry bushes to insure strong canes for next year's crop of berries. Schizanthus for use in cool conservatories or greenhouses should be sown in August in pots or flats and placed in a cold frame.

Strawberry plants set out in August on good, rich, well prepared soil will give a good crop of berries next season. Artificial fertilizers deteriorate rapidly if kept stored after they have been mixed. Keep the chemicals separate and mix just before using.

Geranium cuttings root easily now for plants required for the window garden next winter.

Sweet williams can be increased by layers, as practiced with carnations,

ne mad Seen the Play.

While acting in Sir James Barrie's play, "The Little Minister," at a suburban theater Miss Grace Lane was told at the end of the first act that a gentleman, whose name she did not catch, would like to speak to her.

Miss Lane supposed that it was a reporter on a local paper who desired an interview, and she wearily gave permission for the visitor to be brought into her presence.

When, a little later, the manager brought a small, delicate looking man up to her in the wings she smiled upon him condescendingly and opened the conversation by saying she hoped he liked the play.

"Yes," answered the stranger quietly, 'I've no very grave faults to find with

"I suppose," continued Miss Lane. that you saw it when it was produced at the Haymarket?" "Yes, I saw it there more than once,"

was the reply. "You seem to have taken a great in terest in the play," was Miss Lane's next remark, as she began to show

"Well, you see," said the quiet little man apologetically, "I wrote it." The stranger, whose name she had

signs of moving off.

not caught, was James Matthew Barrie. -London Mail.

The Round Robin.

William Henry P. Fyfe in "Five Thousand Facts and Fanctes" says that round robin is the name given to a remonstrance or petition signed by a number of persons, generally in a circular form, so as to avoid giving prominence to any single name. He contin-

"This device is said to have been first used by the officials of the French government as a means of making known their grievances. The most celebrated 'round robin' in the English language is the one signed by Burke, Gibbon, Sir Joshua Reynolds and others and sent to Dr. Samuel Johnson, requesticg him to amend the epitaph to Oliver Goldsmith in Westminster abbey and suggesting that it be written in English and not in Latin. Johnson accepted the 'round robin' in a kindly spirit, but told Sir Joshua Reynolds, the bearer of the missive, that he would 'never consent to disgrace the walls of Westminster abbey with an English inscription."

Great Men and Doubles.

It is said that there is a French soldier who is the living image of Napoleon I. Other instances have been found of persons born many years apart bearing a striking likeness to one another. Mr. Winston Churchill is the "double" of the Emperor Titus, at least according to the bust of the latter at the British museum, "Dion Boucicault," writes George Augustus Sala, was the very image of Sir Kenelm Digby as he appears in the frontispiece to his 'Choice and Experimental Receipts in Physics and Chirurgery.' Douglas Jerrold was the ikon of Montgolfier, the discoverer of the fire balloon, and the late Montagu Williams, Q. C., if he had donned a flowing black periwlg, might well have sat to a Sir Peter Lely of our times for a portrait of

Kinsale keeps a modest place in the history of Ireland. It was here that Don Juan's fleet landed 3,000 men to join hands with O'Neill, out of which landing grew the story that the cottages at World's End are "still inhabited by the descendants of Spaniards." It was from Kinsale that James II on March 2, 1689, landed and from Kinsale he sailed after his defeat at the battle of the Boyne. Thirty years ago the house in which he spent the night before his departure was still in existence. Kinsale was greater in the past than now, for we read that "of all the Irish ports it was the best situated for intercourse with France and that in the town Marlborough found a thousand barrels of wheat and eighty pipes of claret."-London Spectator.

#### A Woman's Way.

"Sir, we are starting a new railroad and want your daughter to drive the first splke."

"I have no doubt she will consider it an honor to officiate."

"Thank you. We have provided a small gold spike, also a silver ham-"One minute. I don't think she could

drive a spike with a bammer. Better provide a hairbrush." - Louisville Courier-Journal.

## Imagination.

"Robert," said the teacher to a small pupil, "can you tell me what imagination is?"

"Yes, ma'am," replied the little fellow. "Imagination is what makes a fellow think a bee's stinger is three feet long after he gets stung."-Pittsburgh Press.

One Way.

Customer-But your competitors, the Skinnem Mining company, have offices twice as large as yours. Promoter-That only shows our superior business organization. We have concentrated our business twice as much as they have.-Boston Journal.

### Deeply Hurt.

"Am I the first girl you ever kissed?" "Well," said he, "I knew I bungled it, but I didn't think I made that poor s job of it."-Louisville Courier-Journal.

Deduction.

Lotts-Dobson's peculiar; owns a car and owes me \$5! Potts - Only \$5? How little he drives it!-New York Globe.

It is always morning somewhere in the world .- Bichard Hengist Horne.

Sugar and Salt.

Granulated sugar tastes sweet. Powder it in a mortar and it will taste less sweet. Owing to this fact it is hard to convince some people that powdered sugar is not adulterated, aithough this practice, easily detected, is practically unknown at present, writes George W. Rolfe in the Science Conspectus. A quarter of a grain of quinine mixed into a pound of granulated sugar is said to make it taste sweeter. Common salt in small quantities will improve the sweetness of cake and other weet foods, as all cooks know.

Raw sugars, even when they contain negligible quantities of the sweeter mother sirups, taste distinctly sweeter than granulated sugar, although their actual sugar content is less. This is due to the salts and extractive matter in the raw product, and it is why many cooks sigh for the old fashioned open kettle sugar and even prefer the refiners' imitation goods to granulated in making their apple pies.

Sure Cure Always. "Oh, dear," sighed the engaged girl. "I'm so afraid Harold won't make a good husband! He's awfully reckless

with his money.' "Never mind, dear," said the mother soothingly. "He'll get over that after he's married."-St. Louis Post-Dis-
